**Novozymes Opens New Turf and Plant Care Location to Support
Green Industry Product Line**

Salem, VA – February 2, 2009 - Novozymes Biologicals' new Dry Agricultural Products Manufacturing Facility (DAP) is operational and is now producing granular and soluble fertilizer products for the ROOTS Plant Care business. Operating in Merriam, Indiana, the 48,000 square foot facility triples the company's previous capabilities to produce granular and soluble fertilizers for its line of environmentally friendly growth enhancers and disease controls for turf and horticultural markets.

Salem, Va- based Novozymes Biologicals, a wholly-owned subsidiary of Novozymes, the biotech-based world leader in enzymes and microorganisms, produces live microbial products for a variety of applications. Such applications include cleaning and odor control for institutional and household products, industrial and municipal waste treatment products, and new technologies for animal health and plant care.

"The new facility looks great and is operating as expected," said Novozymes Biologicals Business Development Manager, John Sedivy. "This will allow us to accommodate our rapid growth and further improve on timely delivery to our customers and ensure they're getting the highest quality and consistency products available in the market."

Novozymes announced plans for the new facility in April 2007, after zoning laws forced the company out of its previous facility in Albion, Indiana.

###

Novozymes is the world leader in bioinnovation. Together with customers across a broad array of industries, we create tomorrow's industrial biosolutions, improving our customers' business and the use of our planet's resources.

With over 700 products used in 130 countries, Novozymes' bioinnovations improve industrial performance and safeguard the world's resources by offering superior and sustainable solutions for tomorrow's ever-changing marketplace.

Novozymes' natural solutions enhance and promote everything from removing trans-fats in food, to advancing biofuels to power the world tomorrow. Our never-ending

exploration of nature's potential is evidenced by over 5,000 patents, showing what is possible when nature and technology join forces.

Our 5,000+ employees working in research, production and sales around the world are committed to shaping business today and our world tomorrow.
